Letter of Recommendation

To Whom It May Concern:

Johnson Controls have previously used the Blygold product to protect York condensing unit and chiller coils from corrosion on seaside applications. Blygold is a specialised anti-corrosion coating especially suited to the protection of HVAC products that could be susceptible to corrosion in aggressive environments.

We have found the Blygold coil protection to be a very effective coil anti corrosion coil treatment.

Both the Blygold HVAC product and the service offered by Blygold Australia have been exceptional and we have no objection in recommending them for applications in which Blygold offer this product.

Yours faithfully
Johnson Controls Australia Pty Ltd
