Subject: Korean TGV project

Dear Charlie,

ALSTOM is one of the world leading manufacturer of the High Speed Trains and supplied the Korean TGV with 12 trains manufactured in France and realised with EUKORAIL a technology transfer to 34 trains manufactured in Korea by Korean suppliers KOROS. All trailers are supplied with 2 condensers that are installed in the under-frame part of the trains.

Korea has a humid climate and a fairly aggressive industrial atmosphere. This combination is critical for aluminium/copper coils.

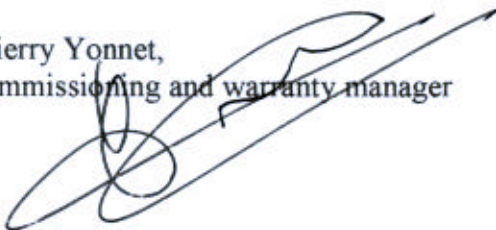

Therefore, to prevent deterioration, ALSTOM contacted BLYGOLD to provide them with a suitable corrosion protective coating and do the application on site in Seoul for 1713 coils.

As a result of applying the BLYGOLD treatments, the coils are now in excellent condition and do not need to be replaced in short term.

ALSTOM is very satisfied with the quality of service, work and product provided by BLYGOLD and can recommend BLYGOLD as a solution to corrosion on heat exchangers.
