

# Florida, one of the most corrosive environments in the world.

Blygold Florida is headquartered in Pompano Beach on the beautiful east coast of the Florida Peninsula. Besides being the exclusive partner for the Florida territory, their facility is also home to Blygold America. From here they service all Blygold licensees in North and South America.

## ***Blygold Florida today is a great example of what a Blygold business is capable of.***

One of the developments that Blygold Florida is expecting a lot from is the Blygold Tube Sheet coating for Centrifugal chillers. After investing in the necessary tools, equipment and Blygold Tube sheet training they are ready to take up this opportunity and the first successes are already booked when writing this interview.

Since 2009 Blygold Florida has worked from their own facility that is painted in grey and

the recognisable Blygold Yellow. From here their team of trained applicators service the entire state of Florida. In this team is one of the most experienced Blygold employees, not only in Florida but probably in the world, is Pieter van der Vlist. Pieter has been with Blygold since 1991 and he celebrated his 25th anniversary last year. The first 14 years he worked for Blygold in the Netherlands but when he had the chance to move to the USA in 2005 for one of the most prestigious projects we ever did, he immediately took on the Challenge. Together with Michel van Basten (Blygold International) they managed to coat 12.000 units for the [palm island project](#) in just 6 months time.

Blygold Florida today is a great example of what a Blygold business is capable of. To grow, step by step, from a small sales office to a successful business were 20 people are working on a daily basis to maintain the respected names they have gained in Florida. Among their customers are some of the most prestigious and well known names in the region like the Miami Dolphins, Walgreens, Mariott hotel & resorts, Disney World and many more.

*Mike Gillis is the General Manager for both Blygold America and Blygold Florida and knows first hand what potential there is for Blygold activities in one of the most corrosive environments in the world. Being a former sales engineer for Trane in Florida, he had to deal with corrosion protection of the vulnerable and expensive cooling equipment on a daily basis and Blygold was then already his first choice.*

*Mike joined the Blygold organisation in 2015 and is enthusiastic about the companies mentalities: Making sure you stay ahead of the competition by working hard, delivering high quality and continuing to search for new opportunities and developments.*
